MATTER OF FACT SOFTWARE LAUNCH
CICS JS/SERVER VERSION 1 RELEASE 1

Today **MATTER OF FACT SOFTWARE** announce the launch of

CICS JS/Server Version 1 Release 1.

Modern business applications demand user interfaces with sophist-
icated features. Many such features are provided by web browsers
that communicate with server technology to access corporate data
and drive business processes. In many large corporations, the
server of choice with which the browser communicates is the IBM
mainframe.

Javascript tools such as Dojo have enabled the rapid development
of browser based user interface functions. The Dojo toolkit itself
has to be served to the browser and it is sensible to retain con-
trol over what is served up to the browser as part of a corporate
business application. The CICS JS/Server allows the Dojo Javas-
cript toolkit to be installed and controlled on the mainframe from
well understood mainframe PDS datasets.

CICS JS/Server offers the means to serve the Dojo Javascript
toolkit directly from mainframe PDS datasets via CICS. Easy to in-
stall and use, CICS JS/Server exploits the usual mainframe indus-
trial strength capabilities that corporate systems demand.

CICS JS/Server was devised to provide control over the serving of the Dojo Javascript Toolkit as it is used by our other product, PlexSpy Application Status Monitor. The realisation that such control was needed led to the development of this solution. It became apparent that our own requirements for control over the Dojo Javascript Toolkit would be matched within other companies that use it.

Simple to install and implement.

Capable of scaling to meet the needs of high performance systems.

This new release of CICS JS/Server supports the latest (at the time of writing) version and release of the Dojo Toolkit (1.7.2). It continues to support the earlier Dojo Toolkit versions 1.5.0 and 1.6.1.

Dojo Toolkit 1.7.2 has been completely refactored around a lightweight modular kernel with minimal base dependencies and retains compatibility with older versions of Dojo.

For more information about Dojo, visit http://dojotoolkit.org/

It is envisaged that CICS JS/Server will continue to evolve over time to serve additional Javascript Toolkits and future versions and releases of Dojo.

Our Managing Director, MR Stephen Mitchell is available for interview. If you require further information, please contact him at STEPHEN.MITCHELL@MATTEROFFACTSOFTWARE.COM.

About Matter of Fact Software
Matter of Fact Software was founded in 2008 to develop and bring to market innovative software products in the IBM Mainframe arena with a special focus on CICS.

Based in Scotland, Matter of Fact Software is a privately owned Company that writes and markets its own software.
