MATTER OF FACT SOFTWARE LAUNCH CICS JS/SERVER VERSION 2

Today **MATTER OF FACT SOFTWARE** announce the launch of **CICS JS/Server Version 2**. This new solution serves several popular Open Source Javascript Libraries from CICS on z/OS.

Modern business applications demand user interfaces with sophisticated features. Many such features are provided by web browsers that communicate with server technology to access corporate data and drive business processes. In many large corporations, the server of choice with which the browser communicates is the IBM mainframe.

Open Source Javascript tools such as the Dojo Toolkit and JQuery have enabled the rapid development of browser based user interface functions. These Open Source resources have to be served to the web browser and it is vitally important that control is retained over what is served up to the browser as part of a corporate business application. Basic web browser functionality can be manipulated and compromised using Javascript and this exposes potential security issues.

The Open Source resources supported are:

Dojo Toolkit JQuery & JQuery UI

Scriptaculous D3JS

YUILibrary MooTools

Prototype

Rickshaw

Our new software also supports the definition and serving of bespoke content and has a mechanism to allow for novel CICS Web Applications to be defined, managed and operated.

CICS JS/Server serves the Open Source resources directly from mainframe PDS datasets via CICS. Easy to install and use, **CICS JS/Server** exploits the usual mainframe industrial strength capabilities that corporate systems demand.

CICS JS/Server was originally devised to provide control over the serving of the Dojo Toolkit as it is used by our other product, *PlexSpy Application Status Monitor*. The realisation that such control was needed led to the development of this solution. It became apparent that our own requirements for control over the Dojo Toolkit would be matched within other companies that use it. Version 2 extends the capabilities of the software to cover several of the most popular Open Source Javascript libraries.

Capable of scaling to meet the needs of high performance systems.

It is envisaged that **CICS JS/Server** will continue to evolve over time to serve additional versions of the Open Source resources and to enhance the content serving feature.

A free trial is available by visiting the company website: www.PlexSpy.co.uk.

Our Managing Director, Mr Stephen Mitchell is available for interview. If you require further information, please contact him at STEPHEN.MITCHELL@MATTEROFFACTSOFTWARE.COM.

About Matter of Fact Software

Matter of Fact Software was founded in 2008 to develop and bring to market innovative software products in the IBM Mainframe arena with a special focus on CICS.

Based in Scotland, Matter of Fact Software is a privately owned Company that writes and markets its own software.
